Subject to applicable certificates of coverage or employee benefit plans, BCBSVT provides benefits for medically necessary chiropractic services, including supportive care, for neuromusculoskeletal conditions as more fully described in this policy. BCBSVT or its designee will determine whether a health care service is medically necessary for the member. BCBSVT determinations of medical necessity shall be based on clinical information that is supported by contemporaneous clinical records and that is available before or during the time of service. The fact that any group or provider has furnished, prescribed, ordered or recommended a treatment does not of itself make the treatment a medically necessary covered benefit.

Inclusion of a service on the fee schedule shall not be considered a determination that the service is medically necessary in all circumstances. Inclusion of a service within the scope of practice of a licensee does not in itself make the service a medically necessary covered benefit.

When a service is considered medically necessary

We cover **medically necessary** Chiropractic Care, including:

- Office visits, spinal and extra-spinal manipulations and associated modalities;
- Home, hospital, or nursing home visits; or
- Diagnostic services (e.g., X-rays and laboratory)

The Plan covers care by Chiropractors who are:

- Network providers and/or participate with the Plan;
- Working within the scope of their licenses; and
- Treating members for a neuro-musculoskeletal condition.

“**Medically necessary** care” means health care services, including diagnostic testing, preventive services and aftercare, that are appropriate, in terms of type, amount, frequency, level, setting, and duration to the member’s diagnosis or condition. Medically necessary care must be informed by generally accepted medical or scientific evidence and consistent with generally accepted practice parameters as recognized by health care professionals in the same specialties as typically provide the procedure or treatment, or diagnose or manage the medical condition; must be informed by the unique needs of each individual patient and each presenting situation; **and**

1. Help restore or maintain the member’s health; **or**
2. Prevent deterioration of or palliate the member’s condition; **or**
3. Prevent the reasonably likely onset of a health problem or detect an incipient problem.

In order to be considered medically necessary, treatment must meet all of the following criteria:

- Informed by generally accepted medical or scientific evidence
- Consistent with standards of the practitioner’s own professional community
- Appropriate in terms of type, amount, frequency, level, intensity, setting and duration for the symptoms, findings and condition of the member
- Scheduled, modified and discontinued appropriately based on the patient’s response to treatment
- Based on findings during physical examination must be based on a finding of asymmetry or misalignment identified on a sectional or segmental level and at least two more of the following and must be clearly documented:
 - Pain/tenderness evaluated in terms of location, quality, and intensity.
 - Range of motion abnormality (changes in active, passive, and accessory joint movements resulting in an increase or a decrease in sectional or segmental mobility).
 - Tissue and/or tone changes in the characteristics of contiguous, or associated soft tissues, including skin, fascia, muscle, and ligament.

- Expected and/or demonstrated to produce a therapeutic benefit of measurable improvement in the member's net health outcome as evidenced by a clinically significant decrease in symptoms and/or a clinically significant increase in function. Demonstrated therapeutic benefit should be in the form of a decrease in the disability score on one of the following assessments:
- Relapsing and recurring conditions. Note: For relapsing and recurring conditions that have achieved a stable level of symptoms and function, demonstration of clinically significant measurable deterioration of symptoms and/or functional status when ongoing treatment is withdrawn may be considered evidence of medical necessity for resumption of treatment. See definition of supportive care.

When a service is considered not medically necessary

- Care when there is neither regression nor improvement. Note: During a course of treatment, when the patient's symptoms and functional status become stable without additional objectively measured clinical improvement and without reasonable clinical expectation of additional objectively measurable clinical improvement in net health outcome, the patient is considered to have reached a clinical plateau known as maximal medical improvement.
- Services beyond the point of maximal medical improvement are not considered medically necessary.
- Care provided as an adjunct to training for athletic, recreational, and occupational activities.
- General conditioning program or self-monitored repetitive exercises or exercise equipment to increase strength and endurance.
- Repetitive exercises to improve walking and/or running distance, strength, and endurance assisted services in supporting unstable members.
- Therapy for a condition when the therapeutic goals of a treatment plan have been achieved and no progress is apparent or expected to occur.
- Services beyond those needed to restore ability to perform Activities of Daily Living
- Chiropractic manipulation for persons without an identifiable clinical condition, functional limitation or symptom.
- Chiropractic services to support the immune system.
- Chiropractic services to support optimal growth and development.
- Preventive/maintenance care - see definition.

Physical Exam as a Basis for Medical Necessity - all requests for continued visits must be accompanied by clinical documentation taken from the medical record to include progress notes and treatment plan(s).

Required Documentation:

1. Chiropractic Records at Initial Assessment and Scheduled Reassessments and Treatment

Plan(s):

Records shall include, at a minimum, documentation of the following, when applicable, consistent with guidance from the American Chiropractic Association (ACA) in the Clinical Documentation Manual and includes the use of ACA acceptable abbreviations:

- a) The patient's case history and physical documents contain appropriate subjective and objective information for presenting complaints.
- b) Findings of all examinations performed.
- c) Findings of special studies, including but not limited to x-ray studies taken or reviewed, and laboratory studies.
- d) Explicit notation in the record on follow-up plans regarding consultation advice and abnormal lab and imaging study results.
- e) Clinical impression (including rationale for changes in diagnosis).
- f) Treatment plan (including rationale for changes in duration or frequency and measurable long and short term goals).
- g) Specific description of anatomical site(s) or region(s) of all treatment services.
- h) Details and rationale for supportive procedures or therapies.
- i) A clear description of the type of adjustment provided, including the body region to which the adjustment was performed, and,
- j) A post-manipulation evaluation of the patient's response to the treatment.

2. Chiropractic Records for Additional Visits:

The request for additional visits must be accompanied by supporting documentation of medical necessity to include:

- a) A prescribed treatment program that is expected to result in significant therapeutic improvement over a clearly defined period of time;
- b) The symptoms being treated;
- c) Diagnostic procedures and results;
- d) Frequency, duration and results of planned treatment modalities; anticipated length of treatment plan with identification of quantifiable, attainable short-term and long-term goals; and
- e) Demonstrated progress toward significant functional gains and/or improved activity tolerances. We strongly recommend using one of the following scored assessments:
 - Copenhagen Neck Functional Disability Scale
 - Oswestry Low Back Pain Disability Questionnaire
 - The Roland-Morris Low Back Pain and Disability Questionnaire
 - Neck Disability Index
 - The Quick Dash Outcome Measure
 - Oxford Knee Score
 - Spinal Stenosis Outcome Questionnaire
 - Headache Disability Index
 - Patient Rated Wrist Evaluation

- Pain Disability Questionnaire
- Quadruple Visual Analogue Scale (QVAS)
- Visual Analogue Scale (VAS)

- f) All decisions made by a chiropractor regarding the use of supportive physical medicine modalities and procedures should be predicated upon a properly documented clinical rationale, which is consistent with current educational and practice standards. Please refer to the definitions of supportive care and preventive/maintenance care below.
- g) The details of all modalities or procedures provided shall be recorded when performed, including time in minutes for all constant attendance modalities and therapeutic procedures and name of provider in constant attendance.
- h) Physical medicine services must be delivered by a qualified provider of physical medicine services practicing within the scope of practice of the applicable license.

3. Chiropractic Records at Interval Visits and Therapies Must Document:

- a) Unresolved problems from previous office visits are addressed in subsequent visits.
- b) Progress notes for each patient encounter in a separate note meeting these standards.
- c) The results of treatment, including changes in symptoms and function.
- d) Plan for follow-up care if any.
- e) Continued work and progress towards specific functional goals. We recommend documenting this with one of the suggested assessments listed above.

Laboratory Testing

Conservative management of neuro-musculoskeletal conditions does not routinely include the use of laboratory testing. Tests that may be considered medically necessary in the treatment of neuro-musculoskeletal conditions are listed in the code appendix.

Diagnostic Imaging

To be considered medically necessary, imaging studies must meet the following four standards:

1. The study must be obtained based on clinical need.
2. The study must be of sufficient diagnostic quality.
3. There must be an adequate written report of the study.
4. The information from the study must be correlated with patient management.

The need for frequent diagnostic images for purely biomechanical analysis is not well-supported, nor is the need for routine imaging of patients prior to release from care. The decision for radiographic re-examination should be based on patient symptoms, physical findings, and the potential impact of the results of the examination on the treatment plan and on the net health outcome for the patient.

Patient Selection for Imaging:

The selection of patients for radiographic examination is based on the following guidelines:

1. The need for radiographic examination is based on history and physical examination findings.
2. The potential diagnostic benefit of the radiographic examination is judged to outweigh the risks of ionizing radiation.
3. Radiography is used to help the practitioner diagnosis pathology, identify contraindications to chiropractic care, identify bone and joint morphology, and acquire postural, and biomechanical information.
4. Routine radiography of patient as a screening procedure is not appropriate practice in chiropractic care and is not considered medically necessary.

Policy Guidelines

Benefits are subject to all terms, limitations and conditions of the subscriber contract.

Benefits for medically necessary chiropractic services are only available when treatment is provided by a licensed chiropractor who participates contractually in our network. Benefits may be subject to member out of pocket cost, including copayment, coinsurance or deductible amounts. In most states, the scope of chiropractic practice may include services that are not included in covered benefits.

A chiropractic visit may include up to four timed units per day. This does NOT include the use of Evaluation and Management (E&M codes) or manipulation codes.

Prior approval is required for the 13th visit forward per plan year. After 12 visits in a plan year, prior approval is required for additional chiropractic treatment with the same, or a different, chiropractic physician. A request for prior approval must contain clinical information required for determination of medical necessity criteria as specified in this policy. If continued chiropractic care is considered medically necessary, up to 6 additional visits will be allowed, after which prior approval will again be required for additional visits. No more than 6 additional visits will be allowed without a clinical update of a member's status.

Although prior approval is required for chiropractic care that is over the initial 12 visits in a plan year and after completion of additional visits authorized under a chiropractic plan of treatment, an acute episode may occur at a time when no visits are currently authorized and there is insufficient time to obtain approval prior to treatment. In this setting, one additional visit for medically necessary care may be approved retroactively if the request is made within 3 business days of the visit. This request must specify the date of the additional visit. If further care beyond this visit is medically necessary, approval will be granted up to six visits, including the visit authorized retroactively.

When any provider (including a chiropractic physician) bills physical therapy therapeutic procedures (CPT 97110-97535) these services will apply to the defined benefit limit for PT, ST, OT combined. These visits will also count against the initial 12 or subsequent approved chiropractic visits. After 12 visits in a plan year, prior approval is required for additional chiropractic treatment with the same, or a different, chiropractic physician.

Members may pay, at their own expense, for chiropractic care designed to prepare them for specific occupational, hobbies, sports, and leisure & recreational activities in addition to any

other non-covered services such as acupuncture or massage therapy. A self-pay agreement, including details of services and member liability must be entered into prior to rendering these services and must be maintained as part of the medical record. Maintenance/Wellness Care/Therapy may be reported under procedure HCPCS code S8990 (physical or manipulative therapy performed for maintenance rather than restorative).

Physical Medicine Treatments

Physical medicine modalities and therapeutic procedures performed by a chiropractor will be evaluated using the BCBSVT Physical Therapy Medical Policy.

Modality CPT® codes 97032 & 97035 are generally considered to be an adjunct to a variety of therapies and when billed by an allopathic, osteopathic, or chiropractic physician, these services do not count against the defined benefit limit for PT, ST, OT combined.

Modality CPT® Codes 97032 & 97035 will only count as an individual Chiropractic visit if no other chiropractic services are rendered at the same visit.

Many BCBSVT Plans include therapy limitations. These limitations are a combination of physical therapy, occupational therapy and speech therapy services. If such services are billed during chiropractic care they will count towards the combined maximum benefit limitation. Chiropractic Manipulation Therapy, as outlined below, does not apply to the combined benefit maximum limitation.

Chiropractic Manipulation Therapy (CMT)

Reimbursement is allowed for one clinically indicated and medically necessary spinal manipulation code (CPT® 98940-98942) per date of service. Reimbursement of specific CMT codes is subject to the subscriber certificate.

For purposes of CMT, there are five spinal regions: cervical (includes atlanto-occipital joint); thoracic (includes costovertebral and costotransverse joints); lumbar; sacral; pelvic (includes sacroiliac joint).

- CPT® 98940 - CMT; spinal, one to two regions.
- CPT® 98941 - CMT; spinal, three to four regions.
- CPT® 98942 - CMT; spinal, five regions.
- CPT® 98943 - CMT; extraspinal, one or more regions: head, including TMJ; lower extremities; upper extremities; rib cage (not including costovertebral and costotransverse joints); abdomen.

NOTE: CPT® code 97140 [(manual therapy techniques, 1 or more regions, each 15 minutes)] and CPT® code 97112[neuromuscular re-education of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing, 1 or more regions, each 15 minutes] cannot be billed when a manipulation is performed in the same spinal or extraspinal area. They are considered inclusive to the manipulation. Append the 59 modifier when the manual therapy or neuromuscular re-education is performed in the same area is not appropriate or supported.

The pre-, intra-, and post-service components of a manipulation service include:

- An update of the patient's history regarding any changes positive or negative since the prior visit.
- A review of the chart, prior treatment plan, or diagnostic imaging.
- Performance of an assessment to determine the location and intensity of the patient's symptoms and medical necessity of the manipulation (with or without use of an instrument as the assessment tool)
- Manual palpation that documents pain or tenderness including location, intensity, quality, tissue response of muscles (spasms, hypertonicity, etc.).
- Motion palpation, joint evaluation, or whatever technique is used to locate and evaluate joint dysfunction/fixations.
- The manipulation of the joint(s) identified in the evaluation to restore normal joint motion/mechanics. Proper documentation of each area manipulated also must be noted in each daily note including technique or instrumentation used if not done by hand.
- A post-manipulation evaluation of the patient's response to the treatment should be noted.
- A determination to continue, cease, or minimally alter the treatment plan
- Patient education or instructions.
- Imaging review
- Chart documentation, consultation and reporting

Evaluation and Management (E/M)

Manipulation (98940-98943) includes a pre-manipulation assessment

A separate E/M service should not be routinely reported with manipulation. This means that a separate evaluation and management (E/M) service for a separate condition will only be paid in the following circumstances:

- Initial examination of a new patient or condition;
- Acute exacerbation of symptoms or a significant change in the patient's condition; or
- Distinctly different indications, which are separately identifiable and unrelated to the manipulation.

Document Precedence

Blue Cross and Blue Shield of Vermont (BCBSVT) Medical Policies are developed to provide clinical guidance and are based on research of current medical literature and review of common medical practices in the treatment and diagnosis of disease. The applicable group/individual contract and member certificate language, or employer's benefit plan if an ASO group, determines benefits that are in effect at the time of service. Since medical practices and knowledge are constantly evolving, BCBSVT reserves the right to review and revise its medical policies periodically. To the extent that there may be any conflict between medical policy and contract/employer benefit plan language, the member's contract/employer benefit plan language takes precedence.

Audit Information

BCBSVT reserves the right to conduct audits on any provider and/or facility to ensure compliance with the guidelines stated in the medical policy. If an audit identifies instances of non-compliance with this medical policy, BCBSVT reserves the right to recoup all non-compliant payments.

Administration and Guidance

Benefit Determination Guidance

Prior approval is required and benefits are subject to all terms, limitations and conditions of the subscriber contract. Prior approval is required after 12 initial visits.

Incomplete authorization requests may result in a delay of decision pending submission of missing information. To be considered complete, see policy guidelines above.

Federal Employee Program (FEP): Members may have different benefits that apply. For further information please contact FEP customer service or refer to the FEP Service Benefit Plan Brochure. It is important to verify the member's benefits prior to providing the service to determine if benefits are available or if there is a specific exclusion in the member's benefit.

Coverage varies according to the member's group or individual contract. Not all groups are required to follow the Vermont legislative mandates. Member Contract language takes precedence over medical policy when there is a conflict.

If the member receives benefits through an Administrative Services Only (ASO) group, benefits may vary or not apply. To verify benefit information, please refer to the member's employer benefit plan documents or contact the customer service department. Language in the employer benefit plan documents takes precedence over medical policy when there is a conflict.

Attachment V
Definitions for Acute, Chronic, Supportive, Preventive/Maintenance Care

1. Most spinal joint problems fall into the following categories:

ACUTE CARE:

- Acute care is considered treatment of an illness, injury, or condition, marked by a sudden onset or abrupt change of the member's health status that requires prompt medical attention. Acute care may range from outpatient evaluation and treatment to intensive inpatient care. Acute care is intended to produce measurable improvement or maximum rehabilitative potential within a reasonable and medically predictable period of time, or

that is moving the member toward a less restrictive setting. Acute services means services which, according to generally accepted professional standards, are expected to provide or sustain significant, measurable clinical improvement within a reasonable and medically predictable period of time.

- A patient's condition is considered to be acute when the patient is being treated for a new injury, or new exacerbation. The result of chiropractic treatment is expected to be an improvement in, or arrest of progression of the patient's condition. This result should be obtained within a reasonable and generally predictable period of time.

CHRONIC CARE:

A patient's condition is considered chronic when it is not expected to significantly improve or be resolved with further treatment. Cert definition: health services provided by a health care Professional for an established clinical condition that is expected to last a year or more and that requires ongoing clinical management attempting to restore the individual to highest function, minimize the negative effects of the condition and prevent complications related to chronic conditions. Examples of chronic conditions include anxiety disorder, asthma, bipolar disorder, COPD, diabetes, heart disease, major depression, post-traumatic stress disorder, schizophrenia or substance abuse.

SUPPORTIVE CARE:

Supportive care is defined as services provided for a known relapsing or recurring condition to prevent an exacerbation of symptoms that would require additional services to restore an individual to his or her usual state of health or to prevent progressive deterioration. Documentation in the medical record must demonstrate that previously when the member reached therapeutic goals he/she could not sustain this improvement and progressively deteriorated when treatment was withdrawn. This pattern must be clearly documented in the medical record with specific notation made as to the required treatment interval.

PREVENTIVE/MAINTENANCE CARE:

- Elective healthcare that is typically long-term, by definition not therapeutically necessary but is provided at preferably regular interval to prevent disease, prolong life, promote health and enhance the quality of life. This care may be provided after maximum therapeutic improvement, without a trial of withdrawal of treatment, to prevent symptomatic deterioration or it may be initiated with patients without symptoms in order to promote health and to prevent future problems. This care may incorporate screening/evaluation procedures designed to identify developing risks or problems that may pertain to the patient's health status and give care/advice for these. Preventive/maintenance care is provided to optimize a patient's health. Maintenance begins when the therapeutic goals of a treatment plan have been achieved and when no further functional progress is apparent or expected to occur.
